Requested Action

Review section 18 request by the State of Florida to use
avermectin on strawberries.

Conclusion and Recommendation

The section 18 can be toxicologically supported provided
that the margin of safety (MOS) for teratogenicity based on
the single-serving analysis is greater than 100 and the
percent ADI utilized, based on reproductive effects, is not
greater than 100 percent for the various subgroups within the
U.S. population. These pivotal determinations are calculated
by the TAS analyses.

The NOEL for teratogenicity to be used for single-serving analysis is 0.06 mg/kg/day, based on cleft palate in CF₁ mice. The MOS should be greater than 100.

The NOEL for the ADI calculation is 0.12 mg/kg/day, based on pup toxicity (death) in the 2-generation rat reproduction study. The uncertainty factor is 300. The percent ADI utilized for the various subgroups (especially infants and children) should not exceed 100 percent.

If RD can determine that the teratogenic MOS is not greater than 100 and ^{or} the percent ADI utilized is greater than 100 percent, the section 18 cannot be toxicologically supported.

Review

The State of Florida requests a section 18 to use AGRI-MEK 0.15 EC (Avermectin) on strawberries to control twospotted spider-mite. The inerts in the formulation are cleared under 180.1001.

The formulation will be applied at a rate of 16 fluid ounces of product per acre. Application is to be made by ground equipment only.

Approximately 5400 acres in 1989 will be treated. This will result in a total of 405 pounds of active ingredient.

The label (attached) for the section 18 has been reviewed. The label signal word should be Warning and precautionary statements have to be changed to be correct. The new restricted use label is correct and supported by the data base.

The toxicology data base has been presented in previous memoranda (one-liners are attached). There are no data gaps.

Tolerances for avermectin and the delta-8,9-isomer have been established for citrus and cotton (contact George LaRocca, PM 15, for details).

The ADI is based on the NOEL of 0.12 mg/kg/day in the 2-generation rat reproduction study. The LEL is 0.40 mg/kg/day and the effects are increased incidence of dead pups at birth, decreased viability and lactation indices, decreased pup body weight, and increased incidence of retinal abnormalities in pups.

A 300-fold uncertainty factor (approved by both the HED and Agency RfD Committees) was utilized. This uncertainty factor provides an MOS of 100 for maternoletality in CF₁ mice

2

(NOEL = 0.05 mg/kg/day), an MOS of 100 for cleft palate for the delta-8,9-isomer (NOEL = 0.06 mg/kg/day), and an MOS of 300 for pup death. A 300 MOS for reproductive effects was needed because of the extreme seriousness of the reproductive effects (pup death and retinal abnormalities) at the LEL of 0.40 mg/kg/day in the rat reproduction study.

Calculation of ADI

$$ADI = \frac{NOEL}{SF}$$

$$ADI = \frac{0.12 \text{ mg/kg/day}}{300}$$

$$ADI = \underline{0.0004 \text{ mg/kg/day}}$$

The oncogenic potential of avermectin is negative in rats and mice in studies conducted at the MTD.

It should be noted that EEB has additional concerns regarding the impact of avermectin on ecological systems.

Avermectin toxicology review

Page _____ is not included in this copy.

Pages 4 through 10 are not included in this copy.

The material not included contains the following type of information:

- Identity of product inert ingredients
 - Identity of product impurities
 - Description of the product manufacturing process
 - Description of product quality control procedures
 - Identity of the source of product ingredients
 - Sales or other commercial/financial information
 - A draft product label
 - The product confidential statement of formula
 - Information about a pending registration action
 - FIFRA registration data
 - The document is a duplicate of page(s) _____
 - The document is not responsive to the request
-

The information not included is generally considered confidential by product registrants. If you have any questions, please contact the individual who prepared the response to your request.

Mutagenic-Ames Species: bacteria Merk Sharpe & Dohme TT87-8046; 6/7/88	Delta-8,9-isomer of abamectin L-652,280-000W005 (91.6% pure)	407134-02	Negative for mutagenicity up to 3000 ug/plate in S. typhimurium TA97a, TA98, TA100, TA1535 and in E. coli WP 2 uvra and WP 2 uvra pKM101 (both with and without metabolic activation).		Acceptable 007080
Mutagenic-Ames Species: bacteria Merk Sharpe & Dohme TT87-8047 and; 6/7/88	Polar degradates of abamectin L-930,406-000W001 (polar degradates from the in film dish photolysis)	407134-05	Negative for mutagenicity up to 10,000 ug/plate in S. typhimurium TA97a, TA98, TA100, TA1535 and E. coli WP2, WP2uvra, and WP2uvra pKM101 (both with and without metabolic activation).		Acceptable 007080

CITATION	MATERIAL	ACCESSION/ MRID NO.	RESULTS	TOX CAT	COREGRADE/ DOCUMENT#
Acute Dermal LD50 Species: rabbit Merk Sharpe & Dohme TT81-3021; 3/16/83	Avermectin (Technical)		LD50 = > 1600 mg/kg. Levels tested : 100, 200, 400, 800, and 1600mg/kg		Supplementary 003967
Dermal sensitization Species: guinea pig Merk Sharpe & Dohme TT83-2506; 4/15/83	Avermectin (Technical)		Negative for skin sensitization.		Minimum 003967
Acute Dermal LD50 Species: rabbit Merk Sharpe & Dohme TT83-031-0	Avermectin (MK-0936) 2.2%		One death . LD50 > 2000 mg/kg (only level tested).	3	Minimum 003967
Acute oral LD50 Species: rat Merk Sharpe & Dohme TT82-097-0	Avermectin (MK-0936) 2.2%		LD50 = 0.7222 ml/kg. Levels tested : 0, 25, 0.40, 0.64, 1.02, and 1.63 ml/kg.	3	Minimum 003967 005288
Primary dermal irritation Species: rabbit Merk Sharpe & Dohme TT-82-3036; 12/2/82	Avermectin (MK-0936) 2.2%		Slight 1.63 ml/kg.	3	Minimum 003967
Primary eye irritation Species: rabbit Merk Sharpe & Dohme TT82-3035; 12/6/82	Avermectin(MK-0936) 2.2%		Conjunctivitis and iritis which cleared after 8 days.	3	Minimum 003967
Acute inhalation LC50 Species: rat Hazleton 284-126; 5/22/79	Avermectin MK-0936) 2.2%		No deaths . LC50 > 5.73 ml/kg (nominal concentration only).	4	Supplementary 003967
Acute oral LD50 Species: rat Merk Sharpe & Dohme TT81-2879; 8/7/81	Avermectin B1 (0.022%)		No deaths. LD50 > 5.0 gm/kg.	3	Minimum 003984
Acute Dermal LD50 Species: rabbit Merk Sharpe & Dohme TT81-2877; 8/31/81	Avermectin B1 (0.022%)		No deaths . LD50 > 2.0 gm/kg .	3	Minimum 003984
